# Number of backlinks

## Essential

This chapter measures how many web pages link to your website domain according to the data providers Alexa.com and SEOprouler.com. The SEOprouler service provides the number of unique linking domains, not the number of all linking pages.

Keep in mind that the raw number of linking web pages is not as important as the quality of the web pages that link to your site.

### Number of backlinks according to these data providers (the more the better)

	Alexa	SEOprouler (unique backlinks)	Peak Value
To Your Site:	1	2	2
To Site 1:	34	69	69
To Site 2:	122	98	122
To Site 3:	15	22	22
To Site 4:	30	39	39
To Site 5:	32	27	32
To Site 6:	22	46	46
To Site 7:	7,442,768	200,000	7,442,768
To Site 8:	3,135	4,930	4,930
To Site 9:	3,135	4,930	4,930
To Site 10:	346	574	574
Range:	1 to 7,442,768	2 to 200,000	22 to 7,442,768

### Advice for the number of backlinks

Summing up all data providers, there are too few web pages that link to your web site "blacklinks.co.uk". You should increase the number of web pages from different domains that link to your web site.

# Anchor texts of backlinks

## Essential

Backlinks are links from other web sites to your site. If many other sites link to your site, then search engines consider your site to be important. However, the number of links is not as important as is the relevance of the linking page and the anchor text used in linking to your site.

This chapter lists the most popular anchor texts used in linking to your site, as well as a sample of the web pages that link to your site, along with the anchor text.

### Most popular anchor texts used to link to your site

Anchor Text	Popularity
<b>black</b> links	50.0%
<b>blacklinks</b>	50.0%

### Sample of the web pages that link to your site

### Advice for the anchor texts of backlinks

To get a high ranking on Google.com (without Places), make sure that the web pages that link to your site use the search term "black business" in their anchor texts. The more links to your web site contain "black business" (or a part of it) in the anchor text, the more likely it is that your web site will get a high ranking on Google.com (without Places) for that search term.

It is advisable to use different but related keywords for the anchor texts. If all links to your web site use exactly the same anchor text, then Google.com (without Places) might lower your rankings because of unnatural linking patterns.

In addition, the quality and reputation of the web pages that link to your site is very important to the search engines.

At least 10% of the analyzed backlink anchor texts contain the search term "black business". This is good.

At least 20% of the analyzed backlink anchor texts contain the search term "black business". This is good.

# Keyword use in body text

## Essential

The body text is the text on your web page that can be seen by people in their web browsers. It does not include HTML commands, comments, etc. The more visible text there is on a web page, the more a search engine can index. The calculations include spaces and punctuation marks.

# Age of web site

## Very Important

Spam sites often come and go quickly. For this reason, search engines tend to trust a web site that has been around for a long time over one that is brand new. The age of the domain is seen as a sign of trustworthiness because it cannot be faked. The data is provided by Alexa.com and SEOprofiler.com.

### Advice for the web site age

The web site age could not be determined. In general, the older your web site, the better it is for your rankings on Google.com (without Places). If you have a young web site, you must compensate by improving the other search engine ranking factors.

## Mentions on social sites

### Important

On social network sites, people decide which web sites are popular. This means that the popularity on social network sites cannot be easily influenced. For this reason, search engines might trust web sites more if they are popular on social networks. ("n/a" means "data not available".)

#### Mentions on social sites (the more the better)

	Delicious.com	Facebook Mentions	Google +1	Twitter Tweets	Total

Range:	all 0	1 to 31,186,162	n/a	0 to 66,589,362	36 to 97,775,524

#### Advice for the mentions on social sites

There are too few web pages that link to your web site "blacklinks.co.uk". You should increase the number of web pages that link to your web site on these social networks.

# Server speed

## Important

Popular web sites often have faster server response times compared to smaller unimportant sites. In addition, most search engines index more pages from fast web sites. This chapter shows you how long it takes on average for web pages on the top ranked sites to load. The data is based on the average server speed of the last 30 days and is provided by Alexa.com ("n/a" means that Alexa.com does not have data about your server speed).

### Server speed results

**Average Page Load Time (measured in seconds, the lower the better)**

Your Site	1	2	3	4	5	6	7	8	9	10	Range
n/a	n/a	2.76s	n/a	2.10s	2.74s	1.37s	3.37s	2.90s	2.90s	n/a	1.37s to 3.37s

### Advice for the server speed

The speed of your web site could not be determined. In general, the faster your web site, the better it could be for your rankings on Google.com (without Places). If you have a slow web site, you should contact or even switch your web hosting provider.

# Keyword use in H2-H6 headline texts

## Important

H2, H3, H4, H5 and H6 headline texts are the texts that are written between the <h2>...</h2>, <h3>...</h3>, etc. tags in the HTML code of your web page. Some search engines give extra relevance to search terms that appear in the headline texts. This chapter examines if this applies to Google.com (without Places), too.

Example: <h3>your big headline text</h3>

# Keyword use in IMG ALT attributes

## Important

The <img alt> attribute defines an alternative text for an image when the user uses a text browser or when the user has turned off the display of images in the web browser application. Microsoft's Internet Explorer displays the alternative text if the user puts the cursor over the graphic. This chapter tries to find out if it makes sense to include the search term in the <img alt> attributes to improve your rankings.

Example:

# Top level domain of web site

## Important

Web sites with certain top level domains (TLD) are statistically more likely to contain higher quality, trustworthy contents. For this reason, search engines might prefer web sites with restricted TLD (.edu, .gov., .mil) over younger TLD (e.g., .biz, .info, .jobs). In addition, country code TLD (e.g., .ca, .de, .fr) are often preferred in the country's local search results.

### Advice for the top level domain of your web site

Your web site URL blacklinks.co.uk contains the country top level domain .co.uk. This can be advantageous for rankings in the country's local search results, but it can be disadvantageous for rankings in international search results.

# Keyword use in bold body text

## Important

The body text is the text on your web page that can be seen by people in their web browsers. The bold body text uses a darker and heavier face than the regular type face. It appears between <b>...</b> or <strong>...</strong> tags in the HTML source of your web page. CSS is not recognized. The statistics include spaces and punctuation marks.

# Number of visitors to the site

## Important

Search engines might look at web site usage data, such as the number of visitors to your site, to determine if your site is reputable and contains popular contents. The Alexa.com traffic rank is based on three months of aggregated traffic data from millions of Alexa Toolbar users and is a combined measure of page views and number of site visitors.

### Advice for the number of visitors to your site

Your web site blacklinks.co.uk does not appear to attract many visitors because your traffic rank is above #100,000 and you have less visitors than the average of your competitors. This could be disadvantageous to your rankings on Google.com (without Places).

# Keyword use in same domain anchor texts

## Moderately Important

Anchor texts are words and sentences that are used as links. Same domain anchor texts are the anchor texts of the links that point to a web page on the same domain. This chapter examines if Google.com (without Places) takes search terms in same domain anchor texts into account.

Example: The HTML tag <a href="contact.htm">Contact information</a> contains the same domain anchor text "Contact information".

# Keyword use in outbound anchor texts

## Moderately Important

Anchor texts are words and sentences that are used as links. Outbound anchor texts are the texts within the <a>...</a> tags when the <a> tag links to a web page on a different domain. This chapter examines if Google.com (without Places) gives relevance to search terms in outbound anchor texts.

Example: The HTML tag <a href="http://www.not-your-site.com/about.htm">About the company</a> contains the outbound anchor text "About the company".

# Keyword use in same domain link URLs

## Moderately Important

Links connect one web page to another. Same domain links are the links in <a href> attributes that point to other pages on the same domain. This chapter examines if search terms in same domain link URLs are relevant to Google.com (without Places).

Example: The HTML tag <a href="contact.htm">Contact information</a> contains the same domain link URL "contact.htm".

# Keyword use in outbound link URLs

## Moderately Important

Links connect one web page to another. Outbound links are the links on a web page that point to web pages on other web sites, i.e. links to other domains. This chapter examines if Google.com (without Places) gives relevance to search terms in outbound links

Example: The HTML tag <a href="http://www.not-your-site.com/info.htm">Click here</a> contains the outbound link URL "www.not-your-site.com/info.htm".

# Keyword use in meta description

## Moderately Important

The Meta Description tag allows you to describe your web page. This chapter tries to find out if Google.com (without Places) takes the Meta Description tag into account. Some search engines display the text to the user in the search results.

Example: <meta name="description" content="This sentence describes the contents of your web site.">

Even if the Meta Description tag might not be important for ranking purposes, you should use the Meta Description tag to make sure that your web site is displayed with an attractive description in the search results.

# Number of trailing slashes in URL

## Moderately Important

The number of trailing slashes (/) in the URL indicates where a web page falls in a site's overall hierarchy. If the URL contains many trailing slashes, meaning it is placed in a sub-sub-directory, then the webmaster does not seem to think that the page is important in relation to the other pages.

Number of trailing slashes											
Your Site	1	2	3	4	5	6	7	8	9	10	Range
0	2	0	0	0	5	1	2	2	1	1	0 to 5

Advice for the number of trailing slashes in your web site URL

The URL blacklinks.co.uk does not contain more or less trailing slashes than the top ranked pages. This means that you do not have to change the number of trailing slashes in your URL.

OK

# HTML validation of web page to W3C standards

## Slightly Important

Web pages are written in special languages called HTML and CSS. If there are errors in the HTML code of your web page, then search engines might not be able to read everything of your web page. You should also check the CSS code of your web page (see link below).

### Validation results

	Validity
HTML:	160 errors, not valid <a href="http://validator.w3.org/check?uri=http://blacklinks.co.uk/">http://validator.w3.org/check?uri=http://blacklinks.co.uk/</a>
CSS:	<a href="http://jigsaw.w3.org/css-validator/validator?uri=http://blacklinks.co.uk/">http://jigsaw.w3.org/css-validator/validator?uri=http://blacklinks.co.uk/</a>

### Advice regarding the validity of your web site

The HTML code validation of your web page blacklinks.co.uk failed. This means that Google.com (without Places) might not be able to read your web page. You should fix any HTML errors.

# Readability level of web page

## Slightly Important

The Flesch Reading Ease test is a United States governmental standard to determine how easy a text is to read. It measures the approximate level of education necessary to understand the web page content. Higher scores indicate the text that is easier to read, and lower numbers mark harder-to-read texts. Scores among different languages are not comparable.

### Readability results

**Flesch Reading Ease Score (0-100, higher score means that the text is easier to understand)**

Your Site	1	2	3	4	5	6	7	8	9	10	Range
52	30	57	35	56	20	n/a	74	45	45	38	20 to 74

**Flesch-Kincaid Grade Level (shows the number of years of education required to understand the text)**

Your Site	1	2	3	4	5	6	7	8	9	10	Range
10	16	7	12	8	14	n/a	5	11	10	13	5 to 16

### Advice for the readability of your web site

The Flesch Reading Ease Score of your web page blacklinks.co.uk is 52. A score of 60 to 80 is considered to be optimal. This means that the text of your web page is too difficult to comprehend. If the language of your web page is not English, then the score might be alright.

To improve your score, break long sentences into shorter sentences and use shorter words. In addition, make sure that you end sentences with punctuation (a period, question mark, or exclamation point). There should be one space between each word, and after any punctuation, including commas.

&lt;&lt;

# Keyword use in the first sentence of the body text

## Slightly Important

The first sentence of the body text is the first sentence after the <body> tag in the HTML code of your web page. Some search engines give more relevance to search terms when they appear in the first sentence. Some will use your first sentence as the description of your page on the search result page.

Example: <body>Here goes the first sentence. This text is not the first sentence.

## Search engine compatibility

This chapter examines the general search engine compatibility of your web page.

### Advice

Search engines need text to index your web pages, to determine the theme of your web site and to produce a site summary. They cannot read what is written on your graphical images or in a Flash movie. Google recommends to create a useful, information-rich site. Fresh, continuously updated content is one of the best ways to ensure that search engines return to your web site (and your visitors, too). Your web page "blacklinks.co.uk" contains 3,179 words which should be enough for search engines.	OK
Your web page doesn't use the Meta Refresh tag so there won't be any problems with the search engines in this aspect.	OK
Your web page doesn't use the Meta Robots tag so there won't be any problems with the search engines in this aspect.	OK
Your web page doesn't use the Meta Title tag so there won't be any problems with the search engines in this aspect.	OK
Your web page doesn't use any Dublin Core meta tags so there won't be any problems with the search engines in this aspect.	OK
Your web page uses the Meta Generator tag twice. Search engines could regard it as a spamming attempt and might decide not index to your web site. You should remove the second Meta Generator tag, even if it's embedded in an <iframe> tag.	<<
Your web page doesn't use the <title> tag twice so there won't be any problems with search engines in this aspect.	OK
Your web page uses script code in an external file so you've already minimized the problems with scripts and the search engines.	OK
Your web page uses style sheet code in an external file so you've already minimized the problems with style sheets and the search engines.	OK
Your web page doesn't use frames so there won't be any problems with the search engines in this aspect.	OK
Some search engines consider tiny text (i.e. font size 1) as an attempt to fool the search engines. Some webmasters have abused tiny text in the past to hide dozens of keywords on a web page that human web surfers cannot see. Your web page doesn't seem to use tiny text so there shouldn't be any problems with the search engines in this aspect.	OK
Your web page URL "blacklinks.co.uk" doesn't indicate a dynamically served web page so there shouldn't be any problems with the search engines in this aspect.	OK
